Executive summary

01 Task 1

- Older Singles/Couples → Highest Contribution to Chip Sales
- 175g Packs → Higher Revenue (Preference for Value Packs)
- Premium Customers → Higher Spending vs Budget (Upsell Opportunity)

02 Task 2

- Store 77 → Sales Increased During Trial (Successful)
- Store 86 → Sales Declined vs Control Store (Unsuccessful)
- Store 88 → Inconclusive (Unreliable Control Store)

Category

Insight:
Older Singles/Couples are the highest contributing customer segment in the chips category.

Key Observations:
- This segment generates the highest total sales compared to other lifestages.
- Likely driven by higher disposable income and frequent purchases.
- Shows strong preference for larger pack sizes.

Business Implication:
This segment represents a key opportunity for targeted promotions and premium product positioning.

Category Overview

Key Insight:

The chips category is primarily driven by Older Singles/Couples, who contribute the highest share of total sales and prefer larger pack sizes.

Supporting Points:

- Strong demand for 175g packs indicates preference for value and bulk buying
- Premium customers contribute higher revenue despite smaller population
- Younger segments contribute less, indicating growth opportunity

Business Implication:

Focusing on high-value segments and optimizing pack size strategy can significantly improve category performance.

Customer Affluence Impact

Key Insight:
Premium customers contribute higher revenue per transaction, indicating stronger purchasing power and preference for higher-value products.

Supporting Points:
- Premium segment spends more per transaction compared to budget customers
- Budget customers tend to purchase smaller or fewer items per visit
- Mainstream customers fall in between but contribute steady volume

Behavior Insight:
Higher affluence leads to higher spending rather than higher purchase frequency.

Business Implication:
Target premium customers with upselling strategies and premium product placement, while using promotions to attract budget customers.

Customer Mix by Affluence & Lifestage

Key Insight:
The majority of customers belong to mainstream and budget segments, with Older Singles/Couples forming a strong presence across all affluence levels.

Supporting Points:
- Budget and Mainstream segments dominate in volume across most lifestages
- Premium customers are fewer but contribute higher value
- Older Singles/Couples appear consistently across all affluence categories
- Young segments are more skewed towards budget and mainstream categories

Business Implication:
Marketing strategies should balance volume-driven segments (budget/mainstream) with value-driven segments (premium) to maximize overall category performance.

Trial store performance

Objective:
To evaluate the effectiveness of the store trial by comparing trial stores with similar control stores.

Approach:
• Selected control stores using correlation analysis based on historical sales patterns
• Compared performance during the trial period

Trial vs Control Stores:
• Store 77 → Control Store 35
• Store 86 → Control Store 231
• Store 88 → Control Store 159

Metric Used:
• Total Sales Revenue

Purpose:
To determine whether the observed changes in sales are due to the trial or normal business trends.

quantium

Classification: Confidential

Control Store Selection

Key Insight:
Control stores were selected based on similarity in historical sales patterns to ensure a fair comparison.

Approach:
- Used correlation analysis on pre-trial monthly sales
- Selected stores with the highest correlation to each trial store
- Excluded other trial stores to avoid bias

Why Not Other Stores?
- Other stores showed weaker or inconsistent sales patterns
- Lower correlation indicates less similarity in customer behavior and performance trends

Conclusion:
Control stores provide a reliable benchmark to measure the true impact of the trial.

Classification: Confidential

Store 77 Performance

Key Insight:
Store 77 shows a clear and consistent increase in total sales during the trial period compared to its control store.

Supporting Evidence:
- Sales trends were similar before the trial, confirming a fair comparison
- During the trial period, Store 77 outperformed the control store
- Positive percentage difference indicates increased customer spending

Conclusion:
The trial was successful in Store 77 and had a positive impact on sales performance.

quantium

Classification: Confidential

Store 86 Performance

Key Insight:
Store 86 shows a decline in total sales during the trial period compared to its control store.

Supporting Evidence:
- Sales trends were similar before the trial, indicating a fair comparison
- During the trial period, Store 86 underperformed relative to the control store
- Negative percentage difference indicates reduced customer spending

Conclusion:
The trial was not successful in Store 86 and did not improve sales performance.

quantium

Classification: Confidential

Store 88 Performance

Key Insight:
Store 88 shows a significantly higher sales value compared to its control store during the trial period.

Supporting Evidence:
• Sales trend diverges strongly from the control store during the trial
• Extremely high percentage difference observed

However:
• The control store has very low baseline sales
• This inflates the percentage difference and makes comparison unreliable

Conclusion:
The results for Store 88 are inconclusive and require further validation with a better control store.

Recommendations & Next Steps

Key Recommendations:
- Roll out the new store layout in stores similar to Store 77
- Investigate the reasons behind poor performance in Store 86
- Reassess control store selection for Store 88

Business Actions:
- Focus on high-value segments such as Older Singles/Couples
- Promote larger pack sizes to drive higher revenue
- Apply targeted strategies for premium and budget customers

Next Steps:
- Conduct further trials across more stores
- Monitor long-term impact of layout changes
- Incorporate additional metrics such as customer count and transaction frequency
